

-- The story I'm writing is about Dataminr. When was the city first approached by Dataminr about provision of services?

- We believe that Dataminr first came up in the Fall of 2019 in meetings with the FBI in preparation for RNC. We requested a presentation which occurred in early 2020.

-- Was there a trial period?

- After the presentation, there was a trial period, until a yearly contract was signed in June of 2020.

-- Have CMPD staff ever watched or surveilled the home of Ash Williams -- legally known as Ashley Shanise Williams -- for any significant period of time?

- NC GS 132-1.4 states that records of criminal investigation conducted by public law enforcement agencies and records of criminal intelligence information compiled by public law enforcement agencies are not public records.

-- Dataminr has said that 97% of its alerts are generated by AI, though it has in the past refused to publicly say what percentage of police-bound alerts -- as opposed to investment alerts, newsroom alerts, etc., -- are generated by AI. Has the company ever told CMPD what percentage of the alerts *that CMPD receives* are generated by AI?

- This question was withdrawn by the requestor.
